PROFESSIONAL SUMMARY

Results-driven Tech Lead and Senior .NET Backend Engineer with 4+ years of experience architecting and delivering high-availability backend systems, RESTful APIs, and microservices using C#, ASP.NET Core, and SQL/PostgreSQL. Promoted to Tech Lead in March 2026 in recognition of strong technical ownership, leading requirement analysis, system architecture, and end-to-end delivery for national-scale government and fintech platforms. Skilled in distributed systems design using Kafka and Redis, cloud infrastructure (AWS, Azure), and DevOps automation (Docker, Jenkins, CI/CD). Proven expertise in financial services and payment technology, having engineered and integrated BBPS, AEPS, DMT, IME, QR-based login, and Cashfree payment gateway systems for mission-critical fintech platforms. Adept at mentoring developers, driving code reviews and engineering best practices, and resolving production issues while collaborating closely with QA, business, and cross-functional technical teams. Recognised as "Star of the Month" for outstanding technical contribution.

CORE SKILLS

Programming	C#, Java, SQL, TypeScript
Backend	.NET Core, ASP.NET Core, Web API, REST API, Dapper, Entity Framework Core, LINQ
Architecture	Microservices, Distributed Systems, OOP, SOLID Principles, Design Patterns, Dependency Injection, Middleware
Messaging & Caching	Kafka, Redis, Zookeeper
Database	SQL Server, PostgreSQL, Query Optimisation, Stored Procedures
Cloud & DevOps	AWS, Microsoft Azure, Docker, Jenkins, CI/CD, Git, Bitbucket
Testing & API Tools	Postman, SOAP, SOAP UI, WSDL
Frontend	Angular, TypeScript, JavaScript, HTML5, CSS3, AJAX, jQuery
Monitoring	Grafana
Domain	FinTech, Payment Processing, Payment Gateway Integration, BBPS, AEPS, DMT, NACH, UPI
Practices	Agile/Scrum, TDD, Technical Leadership, Mentoring, Code Reviews

PROFESSIONAL EXPERIENCE

Tech Lead — Oasys Tech Solutions	March 2026 – Present
Technical Leadership: Lead a team of developers delivering backend services for government and enterprise platforms, providing technical guidance, task planning, and delegation across sprints. Requirement Analysis & Solution Design: Analyse business and functional requirements and translate them into scalable technical solutions for platforms including RCS Odisha, RCS Jharkhand, RCS Bihar, and the Higher Education Department (HED) portal. System Architecture & Microservices Design: Own architecture decisions for ASP.NET Core microservices, defining service boundaries, API contracts, and middleware design to support scalability and maintainability. Code Reviews & Engineering Standards: Conduct code reviews and enforce coding standards, SOLID principles, and design patterns across the team to maintain a clean, maintainable codebase. API & Backend Development: Remain hands-on in designing and developing REST APIs and backend services in C# and ASP.NET Core, ensuring the team follows engineering best practices. Performance & Production Support: Drive performance optimisation initiatives and lead resolution of production issues, minimising downtime for government platforms serving thousands of users. Cross-functional Collaboration: Partner closely with QA, business stakeholders, and other technical teams to align on scope, priorities, and release readiness. Technical Documentation: Author and maintain technical documentation covering system architecture, APIs, and engineering standards for team-wide reference.	
Software Engineer — Oasys Tech Solutions	Nov 2025 – March 2026
- Architected and delivered backend services for RCS Odisha, RCS Jharkhand, and RCS Bihar — government cooperative society management platforms serving thousands of registered entities across multiple states. - Engineered secure authentication and authorisation modules using ASP.NET Core middleware and dependency injection, eliminating security vulnerabilities and reducing unauthorised access incidents to zero.	

- Designed and exposed 15+ RESTful APIs for integration with external government services, enabling seamless cross-department data exchange.
- Implemented dynamic JavaScript and AJAX components that cut client-side page load time by ~40% and improved UX for administrative users.
- Collaborated with cross-functional teams following Agile/Scrum methodology, consistently delivering sprint milestones on time.

Software Developer – Fintech & Payment Systems — Bankify

May 2024 – Oct 2025

- Engineered scalable fintech microservices handling high-volume financial transactions with zero data loss, supporting BBPS, AEPS, IME, and Cashfree payment flows.
- Led end-to-end development of the BBPS (Bharat Bill Payment System) module, enabling real-time bill payment processing with 99.9% uptime SLA compliance.
- Built a QR-based secure login system using tokenised authentication, reducing account compromise risk and eliminating password-based vulnerabilities.
- Integrated AEPS (Aadhaar Enabled Payment System) and IME international money transfer APIs, expanding platform reach to rural banking users and cross-border remittances.
- Leveraged Microsoft Azure and AWS cloud infrastructure for auto-scaling deployments supporting peak transaction loads without performance degradation.

Associate .NET Developer – Banking Microservices — CoreCard Software India Pvt. Ltd.

Jul 2022 – Apr 2024

- Developed and maintained credit card transaction microservices processing millions of records monthly, ensuring 99.95% service availability across banking domain platforms.
- Optimised Jenkins CI/CD pipelines, cutting deployment time by 30% and reducing rollback incidents through automated regression testing integration.
- Led code reviews and refactoring initiatives that improved codebase maintainability, reducing post-release defects by approximately 25%.
- Awarded "Star of the Month" in recognition of outstanding technical contributions and proactive problem-solving during critical release cycles.
- Promoted from intern to full-time within 7 months — mastered credit card transaction flows and Agile deployment processes, earning early conversion.

KEY PROJECTS / DOMAIN EXPERTISE

RCS Odisha / Jharkhand / Bihar	Multi-state government cooperative society management portal — ASP.NET Core backend APIs, microservices, and secure data workflows for regulatory compliance.
Higher Education Department (HED)	Government education portal serving thousands of students and institutions; scalable enrollment and data management REST APIs.
BBPS & AEPS Integration	Real-time Bharat Bill Payment System and Aadhaar-enabled payment integration supporting nationwide financial transactions with high availability, built on .NET Core microservices.
QR Login, DMT & Cashfree Gateway	Tokenised QR-based authentication eliminating password vulnerabilities; DMT (Domestic Money Transfer) flows and Cashfree payment gateway integration for seamless merchant payouts.
Payment Microservices (Kafka/Redis/Docker)	Event-driven, containerised payment-related microservices leveraging Kafka messaging and Redis caching for high-throughput financial transaction processing.

EDUCATION

B.Tech – Electronics & Communication Engineering (Honours)
Indira Gandhi Engineering College, Sagar | 2019 – 2022

Diploma – Electronics Engineering
Kalaniketan Polytechnic College, Jabalpur | 2016 – 2019

ADDITIONAL

- Domain expertise in FinTech, government platforms, banking microservices, and payment processing ecosystems (BBPS, AEPS, DMT, NACH, UPI).
- Strong command of clean architecture, SOLID principles, TDD, and performance-first API design for enterprise-grade applications.
- Actively exploring cloud-native development (Azure Functions, containerised microservices with Docker/Kubernetes) and modern DevSecOps practices.
